

# HOW TO USE THE EYEWITNESS TO ATROCITIES APP

## RECORD, UPLOAD AND SHARE

1. **Download the app from the [Google Play Store](#)** (available for Android only).
2. **Turn on location services** to prove where the footage was taken.
3. **Record photos/videos/audio with the app.** The app automatically stamps the footage with unmodifiable location, date and time (metadata). Internet is only needed to download the app and upload footage, NOT to record metadata.
4. **Add a description to the footage** (perpetrators, victims' names, locations, context, etc.)
5. **Upload a copy of your footage to the secure eyeWitness server** to preserve the location, date and time metadata. If you use phone data to upload, activate "Upload on cellular" from the app gallery settings.
6. **After upload, you can keep a copy and share on social media.**

## SECURITY FEATURES

-  **App disguise:** Select different icons to hide the app on your home screen.
-  **Hidden gallery:** Footage is saved in a secure storage area within the app with passcode protection. If you input an incorrect passcode, the standard phone gallery will open instead of the secure app gallery.
-  **Emergency uninstall:** Quickly delete the app from the camera & gallery settings (footage not yet uploaded will be lost).

## VERIFICATION AND JUSTICE

- ✓ **eyeWitness can verify the authenticity of the footage** for media outlets and others. If you post your footage online, please mention that it was taken with the eyeWitness to Atrocities app so we can verify it.
- ✓ **eyeWitness securely stores the footage** you upload in a secure evidence locker and actively tries to use it as **evidence in investigations and trials.**
- ✓ **You can choose to provide an email address** if you want to be contacted by eyeWitness for consent to use your footage or to obtain more information.
