

TOP TIPS FOR USING THE EYEWITNESS TO ATROCITIES APP

- 1 **Turn ON your phone's location services before taking a photo or video with the app** to show where the footage was taken.

- 2 **Open the photo in the app gallery and add a description** to provide context (access through the information icon).

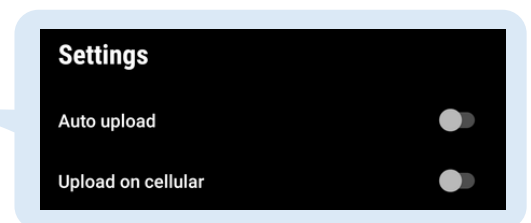

- 3 **Upload your footage to the secure eyeWitness server** to create a verifiable copy. eyeWitness will safeguard this copy for future investigations and even seek out opportunities to use it for justice.

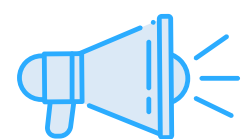

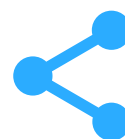

- 4 **Activate "Upload on cellular"** from the app gallery settings if you prefer to use your phone data to upload the footage (otherwise the app will wait for a Wi-Fi connection).

- 5 **Activate "Auto upload"** from the app gallery settings if you prefer your footage to immediately upload to the server when an internet connection is established.

- 6 **After upload, you can share your footage with your networks and keep a copy.**
